

List of methods

The drug substances for which validated methods (different analytical techniques; mainly LC-MS/MS) are available are listed in the following table. In case of simultaneous measurement of metabolite(s) and parent compound, the methods are marked with "(M)" in the list. Some methods also include enantioselective measurements.

Please do not hesitate to contact us at the e-mail address "mail@accgmbh.com" if you would like to know more details about the methods of the listed drug substances or if you have any questions about the development and validation of bioanalytical methods.
